

SatrindTech Srl - Article October 2018

Dear Customer,

The hot summer by SatrindTech: three new shredding solutions for RDF production plants delivered all over the world

The 2017 summer season at SatrindTech has been really, really hot.

During the summer months, we completed production and delivered three machines addressed to three major projects in the waste business: two units of two-shaft shredders and one unit of three-shaft shredder. The machines are now operating in three different RDF-production plants.

The first of the two-shaft shredder, delivered to a treatment plant in Colombia, has been a 50hp shredder, model K 13/50/M, equipped with our patented mechanical /M/AWG drive system.

This system (LINK) permits the customer to benefit of a fully electric machine (savings in maintenance operations costs and energy costs) with modes and behaviors comparable to a hydraulic system. The shredder was in fact commissioned to SatrindTech for the volumetric reduction of auto tyres and debanded truck tyres.

The second two-shaft shredder, produced and delivered during mid-summer, is a model 2R 15/150 (at 150hp), that has been ordered by our customer for a bulky waste treatment plant in Poland.

The third machine delivered has been a three-shaft shredder at 200hp, model 3R 15/200, which is now working 24// in a Chinese treatment plant processing fabric, textile and hazardous materials, suitable for RDF-production.

For any additional information you may all have about the technical solutions we can offer you, please contact our Sales Office at +39 (02) 9037 6683 or email at sales@satrindtech.com.

Our Sales Dept. is your disposal for any information.
